A new Attack control system allows players to choose their best strike, and goalkeeper options for attacking options as well as intelligent goalkeeper positioning, a goalkeeper AI assistant as well as more attacking options for specific roles. New defensive tools include player stunt, speed control and pressure planting. Players now have the ability to choose out of three tools to use in one control, such as a touchline tackle, or to use each individually as required. For the first time, players can control the offside system from the top of the pitch, allowing defenders to use offside traps to aid defensive tactics. Players can now hold both digital sticks in order to get the most out of their abilities. The digital sticks are used to control a variety of actions including ball control, sprinting, dribbling and more. Players can also move more naturally in the low and high press, and have more tactical options in advanced build-up and counter-attack phases. New Goalkeeping features include intelligent goalkeeper positioning, small-sided games, and goalkeeping AI. The new Goalkeeper AI takes responsibility for players' positioning in and around the penalty area. As per any keeper, the keeper can also call for crosses and is able to retreat when out of the play, making his/her decisions for the best possible outcome. The Keeper Vision is an AI-designed system where the goalkeeper sees the entire pitch, but the goalkeeper AI will only take a decision when instructed by the manager. This allows the manager to retain the control to make the best decision. The goalkeeper AI is also more reactive when an opponent has the ball to respond quickly to the goalkeeper's decisions. In an important change, players will now face realistic goalkeepers. Authentic ball and strike physics, improved breathing, player likeness, and reaction of the goalkeeper have been enhanced to ensure that players can enjoy more authentic gameplay on the pitch. The goalkeepers are also much more challenging to play against, meaning that goalkeepers of the future will need to be aware of their position and react to the ball if they want to avoid conceding. In addition to the goalkeeper AI, the defenders in FIFA 22 have been given new, more realistic tactics and play while using their full range of skills such as tackling, pressing, marking, intercepting, and passing. There are three new play systems: 2-2 (two defenders against two attackers) 3-4-3 (four defenders
