The Grammar, Psychology, and Neurobiology of Language, Gandire rapida gandire lenta pdf 27 by.1. Field of the Invention The present invention relates to a multipoint focusing method for use in a projection exposure apparatus that is employed in the fabrication of integrated circuits, liquid-crystal display devices, and other such devices requiring micro-miniaturization, and more particularly, to a multipoint focusing method of the type wherein a plurality of confocal lens arrays are independently driven under the control of a plurality of driving signal patterns. 2. Description of the Related Art The manufacturing of a large scale integrated circuit (LSI) typically comprises: forming resist patterns on a silicon wafer (or a glass plate), which is the underlying workpiece; and using these resist patterns as an etching mask, fabricating devices and interconnecting patterns on the silicon wafer to form an LSI. The projection exposure apparatus used here serves to transfer the pattern of the mask onto the wafer in such a way that the patterns on the mask are exposed to and transferred onto a predetermined position on the wafer. Various types of projection exposure apparatus are known in the prior art, and amongst these, an exposure apparatus using a so-called xe2x80x9cstep and repeatxe2x80x9d method is typically employed to manufacture LSIs, with such an exposure apparatus generally comprising a wafer stage that travels
